DE L'UNIVERSITÉ D'OTTAWA

Have you heard about **valvular heart diseases**?

Valvular heart diseases are dysfunctions of the doors that direct blood flow within the heart. These diseases affect hundreds of thousands of people in Canada.

Heart valve problems are often undetected, and late detection may have severe consequences. Our mobile screening program offers early detection, diagnosis and treatment.

Your 30- to 60-minute appointment involves:

- a mini ultrasound of your heart, a mini electrocardiogram
- assessments, measurements, and rapid finger poke blood tests to evaluate your cardiovascular risk factors
- A cardiologist will review the results and recommendations will be provided at the end of your visit.

A limited number of spaces are available for this initial clinic on December 2.

To participate in the Dec. 2 clinic taking place at the Pembroke Regional Hospital, please complete the intake form via the link below or by scanning the QR code with your phone.

Staff will contact qualified applicants with an appointment time and location.
